ICW Dental – Keyboard Units

Ultra 210 w/ Tray

The Ultra 210 LCD Arm Series with Keyboard Mouse tray allows the full articulation of a flat panel monitor and keyboard. The 210 folds up right over the mount and extends 20" from the center of the mount to the monitor. The monitor can be adjusted to 26" from wall if a keyboard is not used. The Ultra 210 has two articulating joints which together offer 90° of movement. Two locking handles set positions. The monitor can be adjusted vertically on two stainless steel rails with 6" of vertical adjustment. This LCD arm can be mounted to a desk, wall, pole, or a sliding track. The 210 is widely used in Medical and Dental applications.

Retail Price \$455

Ultra 110 w/ Tray

The Ultra 110 Compact LCD Arm is our professional compact LCD and keyboard mount. Whether mounting to a desk, pole or wall this mount keeps your monitor close to your mounting surface while still giving you a wide range of adjustment. This is ICW's most compact mounting system when both a keyboard and a monitor need to be mounted.

The friction arm tilts up to 65° forward and 115° back for optimal viewing. An 11" extension arm is included for greater adjustability and versatility. This friction mount unit features ratcheting handles used to set the tension to maintain the monitor's position. The keyboard tray swivels side to side independently of the monitor and can be flipped up against the monitor when not in use. Both 75mm and 100 mm VESA interface plates are provided.
